VOLUMES 31–35

Reports on Progress in Physics

	Vol	Page
AITKEN M J: Physics applied to archaeology—I. Dating	33	941
ANKETELL J and NICHOLLS R W: The afterglow and energy transfer mechanisms of active nitrogen	33	269
corrigenda	33	815
ANTHONY L J, EAST H and SLATER M J: The growth of the literature of physics	32	709
BAILIN D: The theory of weak interactions in particle physics	34	491
BAKER J M: Interactions between ions with orbital angular momentum in insulators	34	109
BARDSLEY J N and MANDL F: Resonant scattering of electrons by molecules	31	471
BARTON D and FITCH J P: Applications of algebraic manipulative programs in physics	35	235
BELL R J: The dynamics of disordered lattices	35	1315
BERRY M V and MOUNT K E: Semiclassical approximations in wave mechanics	35	315
BIRCH K G: Spatial filtering in optical data processing	35	1265
BLOOR D and COPLAND G M: Far infrared spectra of magnetic ions in crystals	35	1173
BODENHEIMER P: Stellar evolution toward the main sequence	35	1
BRANSDEN B H: The theory of charge exchange	35	949
BRILL D R and GOWDY R H: Quantization of general relativity	33	413
BROIDO M M: Green functions in particle physics	32	493
BUDD W. F. and RADOK U: Glaciers and other large ice masses	34	1
BULLOUGH R and NEWMAN R C: The kinetics of migration of point defects to dislocations	33	101
CAMPBELL D S and MORLEY A R: Electrical conduction in thin metallic, dielectric and metallic–dielectric films	34	283
CHAN HONG-MO: Inelastic collisions of hadrons and the multi-Regge model	32	607
CHRISTIAN J W and VÍTEK V: Dislocations and stacking faults	33	307
CLARK D J: Accelerators for nuclear physics	35	1007
COLE G H A: Classical fluids and the superposition approximation	31	419
COLE G H A: Statistical theory of transport in a classical dense fluid	33	737
COOK A H: Quantum metrology—standards of measurement based on atomic and quantum phenomena	35	463
COPLAND G M, *see* BLOOR D		
COWLEY R A: Anharmonic crystals	31	123
CRACKNELL A P: Group theory and magnetic phenomena in solids	32	633
DEARNALEY G: Ion bombardment and implantation	32	405
DEARNALEY G, STONEHAM A M and MORGAN D V : Electrical phenomena in oxide semiconductor films	33	1129
DELANEY J A and PIPPARD A B: Electrodeless methods for conductivity measurement in metals	35	677
DEW-HUGHES D: The metallurgical enhancement of type II superconductors	34	821
DODSON C J T: The nature of bonds on paper and the behaviour of paper under mechanical strain	33	1
EAST H, *see* ANTHONY L J		
EDEN R J: Regge poles and elementary particles	34	995
ENGLMAN R, *see* RUPPIN R		
ERBER T and LATAL H G: Flux compression theories	33	1069
EVANS D E and KATZENSTEIN J: Laser light scattering in laboratory plasmas	32	207
FABIAN D J, WATSON L M and MARSHALL C A W: Soft x ray spectroscopy and the electronic structure of solids	34	601
FARAGO P S: Electron spin polarization	34	1055
FITCH J P, *see* BARTON D		

	Vol	Page
FLETCHER N H: Structural aspects of the ice–water system	34	913
FRYER P A: Vibration analysis by holography	33	489
FURDYNA J K, *see* PALIK E D		
GABOR D: Progress in holography	32	395
GALBRAITH W: Hadron–nucleon total cross sections at high energies	32	547
DE GENNES P-G: Some conformation problems for long macromolecules	32	187
GOODWIN D W and HEAVENS O S: Doped-crystal and gas lasers	31	777
GOWDY R H, *see* BRILL D R		
HART M: Bragg reflection x ray optics	34	435
HEAVENS O S, *see* GOODWIN D W		
HERLACH F: Megagauss magnetic fields	31	341
HOGDSON P E: The nuclear optical model	34	765
corrigendum	34	1249
INGHAM M F: The light of the night sky and the interplanetary medium	34	875
IRVINE J M: The theory of nuclear energy levels	31	1
JIRGENSONS B: Natural organic macromolecules	35	55
JOBES M and SHAYLOR H R: Data analysis techniques in high energy physics	35	1077
JONES G A: The nuclear surface	33	645
JUKES J D: Plasma stability in magnetic traps: II—Micro-stability theory	31	305
KATZENSTEIN J, *see* EVANS D E		
KELLER A: Polymer crystals	31	623
KILLINGBECK J: Group theory and topology in solid state physics	33	533
KIRK T. B. W. and WILSON R: Ten years of accelerator physics	35	529
KLINGER M I: Electrons in low-mobility and disordered semiconductors: theory of transport and related optical phenomena	31	225
LAINÉ D C: Molecular beam masers	33	1001
LATAL H G, *see* ERBER T		
LATHAM J: Cloud physics	32	69
LISSBERGER P H: Optical applications of dielectric thin films	33	197
LONGAIR M S: Observational cosmology	34	1125
LOVESEY S. W and RIMMER D E: The theory of elastic scattering of neutrons by magnetic salts	32	333
LOWDE R D, *see* MARSHALL W		
MCKEE J S C: The three-body problem in nuclear physics	33	691
MCNALLY D: Theories of star formation	34	71
MANDL F, *see* BARDSLEY J N		
MARCH N H and STODDART J C: Localization of electrons in condensed matter	31	533
MARSHALL C A W, *see* FABIAN D J		
MARSHALL W and LOWDE R D: Magnetic correlations and neutron scattering	31	705
MORAVCSIK M J: The interaction of two nucleons	35	587
MORGAN D V, *see* DEARNALEY G		
MORLEY A R, *see* CAMPBELL D S		
MOTT N F and ZINAMON Z: The metal–nonmetal transition	33	881
MOUNT K E, *see* BERRY M V		
MURGATROYD R J: The physics and dynamics of the stratosphere and mesosphere	33	817
NANDY K, *see* WICKRAMASINGHE N C		
NEWMAN R C, *see* BULLOUGH R		
NICHOLLS R W, *see* ANKETELL J		
O'BRIEN P N S and SYMES M P: Model seismology	34	697
OHLSEN G G: Polarization transfer and spin correlation experiments in nuclear physics	35	717
PALIK E D and FURDYNA J K: Infrared and microwave magnetoplasma effects in semiconductors	33	1193
PIPPARD A B, *see* DELANEY J A		
PRIVOROTSKII I A: Thermodynamic theory of domain structures	35	115
RADOK U, *see* BUDD W F		
RIMMER D E, *see* LOVESEY S W		
RÖSSLER U and TREUSCH J: Semi-empirical band structure theory	35	883
ROWE E G P and SQUIRES E J: The present status of C, P and T invariance	32	273
RUPPIN R and ENGLMAN R: Optical phonons of small crystals	33	149

	Vol	Page
SHAYLOR H R, *see* JOBES M		
SLATER M J, *see* ANTHONY L J		
SLOBODRIAN R J: Final-state interactions	**34**	175
corrigenda	**34**	1249
SMITH F G: Pulsars	**35**	399
SQUIRES E J, *see* ROWE E G P		
STODDART J C, *see* MARCH N H		
STONEHAM A M, *see* DEARNALEY G		
STOW C D: Atmospheric electricity	**32**	1
STUART W. F.: Earth's field magnetometry	**35**	803
SYMES M P, *see* O'BRIEN P N S		
TAYLER R J: Stellar evolution	**31**	167
TREUSCH J, *see* RÖSSLER U		
VINEN W F: Macroscopic quantum effects in superfluids	**31**	61
VÍTEK V, *see* CHRISTIAN J W		
WATSON L M, *see* FABIAN D J		
WELLS P T N: The medical application of ultrasonics	**33**	45
WICKRAMASINGHE N C and NANDY K: Recent work on interstellar grains	**35**	157
WILSON R, *see* KIRK T B W		
WOOLFSON M M: The evolution of the solar system	**32**	135
WOOLFSON M M: Direct methods in crystallography	**34**	369
ZINAMON Z, *see* MOTT N F		

Cumulative subject index

VOLUMES 31–35

Reports on Progress in Physics

	Vol	Page
Accelerator physics, ten years of	35	529
Accelerators for nuclear physics	35	1007
Afterglow and energy transfer mechanisms of active nitrogen	33	269
corrigenda	33	815
Algebraic manipulative programs in physics, applications of	35	235
Angular momentum, orbital, interactions between ions with, in insulators	34	109
Anharmonic crystals	31	123
Approximation, superposition, and classical fluids	31	419
Approximations, semiclassical, in wave mechanics	35	315
Archaeology, physics applied to—Dating	33	941
Astronomy, *see* Cosmology, Interplanetary, Interstellar, Pulsars, Solar, Star, Stellar		
Atmospheric electricity	32	1
Band structure, semi-empirical, theory	35	883
Band structure, *see also* Electronic structure		
Bombardment, ion, and implantation	32	405
Bonds on paper, nature of, and behaviour of paper under mechanical strain	33	1
Bragg reflection x ray optics	34	435
Bubble chambers, *see* Data analysis techniques		
C P and T invariance, present status of	32	273
Charge exchange, theory of	35	949
Classical fluids and the superposition approximation	31	419
Cloud physics	32	69
Collisions, inelastic, of hadrons and the multi-Regge model	32	607
Collisions, *see also* Charge exchange, Electron spin, Scattering		
Compression, flux, theories	33	1069
Condensed matter, localization of electrons in	31	533
Conduction, electrical, in thin metallic, dielectric and metallic–dielectric films	34	283
Conductivity measurement in metals, electrodeless methods for	35	677
Conformation problems for long macromolecules	32	187
Correlation, spin, and polarization transfer experiments in nuclear physics	35	717
Correlations, magnetic, and neutron scattering	31	705
Cosmology, observational	34	1125
Cross sections, total, hadron–nucleon, at high energies	32	547
Crystal, doped-, and gas lasers	31	777
Crystal structure, *see* Direct methods		
Crystallography, direct methods in	34	369
Crystals, anharmonic	31	123
Crystals, magnetic ions in, far infrared spectra of	35	1173
Crystals, polymer	31	623
Crystals, small, optical phonons of	33	149
Crystals, *see also* Dislocations		
Data analysis techniques in high energy physics	35	1077
Data-processing, optical, spatial filtering in	35	1265
Dating—Physics applied to archaeology	33	941
Dielectric thin films, optical applications of	33	197
Dielectric, *see also* Films		
Direct methods in crystallography	34	369
Dislocations and stacking faults	33	307
Dislocations, kinetics of migration of point defects to	33	101
Disordered and low-mobility semiconductors, electrons in: theory of transport and related optical phenomena	31	225

	Vol	Page
Disordered lattices, dynamics of	35	1315
Domain structures, thermodynamic theory of	35	115
Doped-crystal and gas lasers	31	777
Dynamics and physics of stratosphere and mesosphere	33	817
Dynamics of disordered lattices	35	1315
Earth's field magnetometry	35	803
Elastic scattering of nucleons by magnetic salts, theory of	32	333
Electrical conduction in thin metallic, dielectric and metallic–dielectric films	34	283
Electrical phenomena in oxide semiconductor films	33	1129
Electricity, atmospheric	32	1
Electrodeless methods for conductivity measurement in metals	35	677
Electron spin polarization	34	1055
Electronic structure and soft x ray spectroscopy of solids	34	601
Electrons in low-mobility and disordered semiconductors: theory of transport and related optical phenomena	31	225
Electrons, localization of, in condensed matter	31	533
Electrons, resonant scattering of, by molecules	31	471
Elementary particles and Regge poles	34	995
Elementary particles, *see* High energy physics, Particle physics		
Energy levels, nuclear, theory of	31	1
Energy transfer mechanisms and afterglow of active nitrogen	33	269
corrigenda	33	815
Evolution of the solar system	32	135
Evolution, stellar	31	167
Evolution, stellar, toward the main sequence	35	1
Exchange, charge, theory of	35	949
Far infrared spectra of magnetic ions in crystals	35	1173
Ferromagnetism, *see* Domain structures		
Field magnetometry, Earth's	35	803
Fields, megagauss magnetic	31	341
Films, dielectric thin, optical applications of	33	197
Films, oxide semiconductor, electrical phenomena in	33	1129
Films, thin metallic dielectric and metallic–dielectric, electrical conduction in	34	283
Filtering, spatial, in optical data-processing	35	000
Final-state interactions	34	175
Fluid, classical dense, statistical theory of transport in	33	737
Fluids, classical, and the superposition approximation	31	419
Flux compression theories	33	1069
Gas lasers, doped-crystal and	31	777
General relativity, quantization of	33	413
Geomagnetism, *see* Magnetometry		
Geophysics, *see* Glaciers, Magnetometry, Seismology		
Glaciers and other large ice masses	34	1
Grains, interstellar, recent work on	35	157
Green functions in particle physics	32	493
Group theory and magnetic phenomena in solids	32	633
Group theory and topology in solid state physics	33	533
Growth of the literature of physics	32	709
Hadron–nucleon total cross sections at high energies	32	547
Hadrons, inelastic collisions of, and the multi-Regge model	32	607
High energies, hadron–nucleon total cross sections at	32	547
High energy physics, data analysis techniques in	35	1077
High energy physics, *see also* Elementary particles, Particle physics		
Holography, progress in	32	395
Holography, vibration analysis by	33	489
Ice masses, large, and glaciers	34	1
Ice–water system, structural aspects of	34	913
Implantation, ion bombardment and	32	405
Inelastic collisions of hadrons and the multi-Regge model	32	607
Infrared and microwave magnetoplasma effects in semiconductors	33	1193

	Vol	Page
Infrared, far, spectra of magnetic ions in crystals	35	1173
Insulators, interactions between ions with orbital angular momentum in	34	109
Interaction of two nucleons	35	587
Interactions between ions with orbital angular momentum in insulators	34	109
Interactions, final state	34	175
Interactions, weak, in particle physics	34	491
Interferometers, *see* Bragg reflection		
Interplanetary medium and night sky, light of	34	875
Interstellar grains, recent work on	35	157
Invariance, C P and T, present status of	32	273
Ion bombardment and implantation	32	405
Ions, magnetic, in crystals, far infrared spectra of	35	1173
Ions with orbital angular momentum in insulators, interactions between	34	109
Kinetics of migration of point defects to dislocations	33	101
Laser, light scattering in laboratory plasmas	32	207
Lasers, doped-crystal and gas	31	777
Lattices, disordered, dynamics of	35	000
Light of night sky and interplanetary medium	34	875
Literature of physics, growth of	32	709
Macromolecules, long, some conformation problems in	32	187
Macromolecules, natural organic	35	55
Macroscopic quantum effects in superfluids	31	61
Magnetic correlations and neutron scattering	31	705
Magnetic fields, megagauss	31	341
Magnetic ions in crystals, far infrared spectra of	35	1173
Magnetic phenomena and group theory in solids	32	633
Magnetic salts, theory of elastic scattering of nucleons by	32	333
Magnetic traps, plasma stability in—microstability theory	31	305
Magnetometry, Earth's field	35	803
Magnetoplasma effects, infrared and microwave, in semiconductors	33	1193
Main sequence, stellar evolution toward	35	1
Masers, molecular beam	33	1001
Matter, condensed, localization of electrons in	31	533
Measurement, conductivity, electrodeless methods for in metals	35	677
Measurement, standards of, based on atomic and quantum phenomena—quantum metrology	35	463
Medical application of ultrasonics	33	45
Megagauss magnetic fields	31	341
Mesosphere and stratosphere, physics and dynamics of	33	817
Metallic, *see* Films		
Metallurgical enhancement of type II superconductors	34	821
Metal–nonmetal transition	33	881
Metals, conductivity measurement in, electrodeless methods for	35	677
Meteorology, *see* Atmospheric, Cloud, Stratosphere		
Metrology, quantum—standards of measurement based on atomic and quantum phenomena	35	463
Micro-stability theory—plasma stability in magnetic traps	31	305
Microwave and infrared magnetoplasma effects in semiconductors	33	1193
Migration of point defects to dislocations, kinetics of	33	101
Mobility, low-, and disordered semiconductors, electrons in: theory of transport and related optical phenomena	31	225
Model seismology	34	697
Molecular beam masers	33	1001
Molecules, resonant scattering of electrons by	31	471
Natural organic macromolecules	35	55
Neutron scattering, magnetic correlations and	31	705
Neutrons, elastic scattering of, by magnetic salts, theory of	32	333
Night sky and interplanetary medium, light of	34	875
Nitrogen, active, afterglow and energy transfer mechanisms of	33	269
corrigenda	33	815

	Vol	Page
Nonmetal, metal–, transition	33	881
Nuclear energy levels, theory of	31	1
Nuclear optical model	34	765
corrigenda	34	1249
Nuclear physics, accelerators for	35	1007
Nuclear physics, polarization transfer and spin correlation experiments in	35	717
Nuclear physics, three-body problem in	33	691
Nuclear physics, *see also* Final-state, Two nucleons		
Nuclear surface	33	645
Nucleon, hadron–, total cross sections at high energies	32	547
Nucleons, two, interaction of	35	587
Observational cosmology	34	1125
Optical applications of dielectric thin films	33	197
Optical data-processing, spatial filtering in	35	1265
Optical, nuclear, model	34	765
Optical phenomena, theory of transport and related: electrons in low-mobility and disordered semiconductors	31	225
Optical phonons of small crystals	33	149
Optics, x ray, Bragg reflection	34	435
Orbital angular momentum, ions with, interactions between in insulators	34	109
Organic macromolecules, natural	35	55
Oxide semiconductor films, electrical phenomena in	33	1129
Paper, behaviour under mechanical strain and nature of bonds	33	1
Particle physics, Green functions in	32	493
Particle physics, weak interactions in	34	491
Particle physics, *see also* Accelerator physics, Final-state, Hadrons, Invariance, Two nucleons		
Particles, elementary, and Regge poles	34	995
Phonons, optical, of small crystals	33	149
Physics and dynamics of stratosphere and mesosphere	33	817
Physics applied to archaeology—Dating	33	941
Physics, literature, growth of	32	709
Plasmas, laboratory, laser light scattering in	32	207
Plasma stability in magnetic traps: II—Micro-stability theory	31	305
Point defects, migration to dislocations, kinetics of	33	101
Polarization, electron spin	34	1055
Polarization transfer and spin correlation experiments in nuclear physics	35	717
Polymer crystals	31	623
Polymers, *see also* Macromolecules		
Programs, algebraic manipulative, applications of in physics	35	235
Pulsars	35	399
Quantization of general relativity	33	413
Quantum effects, macroscopic, in superfluids	31	61
Quantum metrology—standards of measurement based on atomic and quantum phenomena	35	463
Regge, multi-, model, and inelastic collisions of hadrons	32	607
Regge poles and elementary particles	34	995
Relativity, general, quantization of	33	413
Resonant scattering of electrons by molecules	31	471
Scattering, elastic, of neutrons by magnetic salts	32	333
Scattering, nuclear, magnetic correlations and	31	705
Scattering, resonant, of electrons by molecules	31	471
Scattering, *see also* Electron spin		
Seismology, model	34	697
Semiclassical approximations in wave mechanics	35	315
Semiconductor films, oxide, electrical phenomena in	33	1129
Semiconductors, infrared and microwave magnetoplasma effects in	33	1193
Semiconductors, low-mobility and disordered, electrons in: theory of transport and related optical phenomena	31	225
Semi-empirical band structure theory	35	883

	Vol	Page
Sequence, main, stellar evolution toward	35	1
Sky, night, and interplanetary medium, light of	34	875
Soft x ray spectroscopy and electronic structure of solids	34	601
Solar system, evolution of	32	135
Solid state physics, group theory and topology in	33	533
Solids, electronic structure and soft x ray spectroscopy of	34	601
Solids, group theory and magnetic phenomena in	32	633
Spatial filtering in optical data-processing	35	1265
Spectra, far infrared, of magnetic ions in crystals	35	1173
Spectroscopy, soft x ray, and electronic structure of solids	34	601
Spectroscopy, *see also* Afterglow		
Spin correlation and polarization transfer experiments in nuclear physics	35	717
Spin, electron, polarization	34	1055
Stacking faults and dislocations	33	307
Standards of measurement based on atomic and quantum phenomena—quantum metrology	35	463
Star formation, theories of	34	71
Statistical physics, *see* Classical fluids, Magnetic correlations		
Statistical theory of transport in a classical dense fluid	33	737
Stellar evolution	31	167
Stellar evolution toward the main sequence	35	1
Strain, mechanical, behaviour of paper under, and nature of bonds on paper	33	1
Stratosphere and mesosphere, physics and dynamics of	33	817
Structural aspects of the ice–water system	34	913
Structure, crystal, *see* Direct methods		
Structure, electronic, and soft x ray spectroscopy of solids	34	601
Structure, semi-empirical band, theory	35	883
Structures, domain, thermodynamic theory of	35	115
Superconductors, type II, metallurgical enhancement of	34	821
Superconductors, *see also* Superfluids		
Superfluids, macroscopic quantum effects in	31	61
Superposition approximation, classical fluids and	31	419
Surface, nuclear	33	645
Thermodynamic theory of domain structures	35	115
Three-body problem in nuclear physics	33	691
Topology and group theory in solid state physics	33	533
Transfer, polarization, and spin correlation experiments in nuclear physics	35	717
Transport and related optical phenomena, theory of: electrons in low-mobility and disordered semiconductors	31	225
Transport, statistical theory in a classical dense fluid	33	737
Two nucleons, interaction of	35	587
Ultrasonics, medical application of	33	45
Vibration analysis by holography	33	489
Vibrations, atomic, *see* Disordered lattices		
Water, ice–, system, structural aspects of	34	913
Wave mechanics, semiclassical approximations in	35	315
Weak interactions in particle physics	34	491
x ray crystallography, *see* Direct methods		
x ray optics, Bragg reflection	34	435
x ray spectroscopy, soft, and electronic structure of solids	34	601
